Professional Summary

Analytics Engineer & Junior Data Engineer with enterprise internship experience at **GBM (IBM & Google Cloud Premier Partner)** and hands-on experience building **governed dimensional data models, certified data marts, and automated data quality tests** in **Google BigQuery** using **Google Dataform (SQLX, a dbt-comparable SQL transformation framework)**. **Google Cloud Certified — Associate Data Practitioner**, fluent in **English (C1 Advanced, EF SET 66/100)**, experienced in translating business requirements into **shared metric definitions, Star Schema models, documented data products, and reporting-layer datasets** using **SQL, Python, Git, and Spec-Driven Development (SDD)**.

Experience

Data Engineer Intern (Digital Solutions Specialist), GBM – San Salvador July 2026 – Oct 2026

- Collaborated with technical and business stakeholders to translate requirements into a **cloud ELT & dimensional data warehouse proposal** on **Google Cloud (BigQuery, Dataform SQLX, Datastream CDC, Cloud Storage)**, documenting **model definitions, table dependencies, and entity-relationship schemas in Lucidchart** alongside **SQL DDL** scripts.
- Built, tested, and maintained **ETL data integration workflows under technical mentorship** in **IBM InfoSphere DataStage** (Transformers, Lookups, Joins, Merge) and **IBM DB2 LUW on Linux RHEL**, investigating data discrepancies and tracing schema anomalies to their upstream source across enterprise test datasets.
- Contributed to **data governance, security compliance, and downstream risk assessment** across client proposals by co-authoring **GCP security & governance guidelines** (least-privilege **IAM, MFA, audit logging, data lineage**, credential rotation) and modeling infrastructure costs in **Google Cloud Pricing Calculator**.
- **Co-author | OntoTab (GBM):** Executed reproducible **Python** data validation and benchmark workflows under **5×3 nested cross-validation** across **30,000 credit-risk records** (UCI Taiwan), evaluating ontology-enriched text representations (**BGE-M3**) against structured numeric features across Logistic Regression, XGBoost (**0.5596 AP** baseline R8 vs **0.5069 AP** text R5 and **0.5568 AP** hybrid R9), and MLP.

Projects

FERROSTATS — Governed Medallion Data Marts, Metric Layer & Supply-Chain BI on GCP GitHub | Looker Studio BI | Live App

- Built and maintained a governed **Medallion Data Lakehouse (Bronze / Silver / Gold)** in **Google BigQuery** orchestrated via **Google Dataform (SQLX transformation framework comparable to dbt)**, structuring **7 Bronze tables** (`raw_sales`, `raw_sale_items`, `raw_products`, `raw_inventory_movements`), **3 Silver staging views** (`stg_sales`, `stg_sale_items`, `stg_products`), and **3 reusable Gold Star Schema data marts** (`fct_daily_sales`, `mart_inventory_pareto_abc`, `dim_products`).
- Implemented **automated data quality tests and assertions** in Dataform SQLX (uniqueness, non-null, and referential integrity checks), tracing upstream ingestion discrepancies to their source and assessing **downstream DAG dependencies** before releasing changes to reporting marts.
- Established **consistent business logic and documented definitions for shared supply-chain, distribution, and inventory metrics** under **Spec-Driven Development (SDD)** — including **80/20 Pareto ABC segmentation, Daily Burn Rate, Days of Inventory (DOI), and Reorder Point (ROP)** — powering semantic datasets for a 3-page **Google Looker Studio** reporting layer.
- Used **Git version control, collaborative review practices, and Spec-Driven Development (SDD)** to document model ownership, schema contracts, and known limitations while maintaining a FinOps-governed (**<$1/mo**) GCP deployment across **Cloud Run and BigQuery**.

Skills

Data Transformation & Modeling: Google Dataform (SQLX — comparable to dbt), Dimensional Modeling (Kimball Star Schema, Fact & Dimension Tables, Reusable Data Marts), Medallion Architecture (Bronze/Silver/Gold), Semantic & Shared Metric Definitions, Lucidchart

Data Quality, Documentation & Governance: Automated Data Quality Tests & Assertions, Root-Cause Discrepancy Investigation, Downstream Lineage & Impact Assessment, Spec-Driven Development (SDD) Model Documentation, Data Governance & Security Compliance (IAM, MFA, Audit Logging)

Cloud Data Warehouses & BI Reporting: Google Cloud Platform (BigQuery, Cloud Storage, Cloud Run, FinOps & Pricing Calculator), Looker Studio (Reporting Layer & Executive Dashboards), working knowledge of Datastream CDC, familiar with IBM InfoSphere DataStage & IBM DB2 LUW

Languages & Release Practices: SQL (GoogleSQL, PostgreSQL, Window Functions, CTEs, DDL/DML), Python 3.11 (Pandas, NumPy, Automation & Data Validation), Git/SSH, Code Review & CI/CD Release Workflows, Azure DevOps, Linux RHEL, Spanish (Native), English (C1 Advanced — EF SET 66/100)

Certifications

Google Cloud Certified — Associate Data Practitioner (ID: 23e3584a246f4c149f26fea03cebcbbb) Oct 2026 – Oct 2029
Google Cloud Skill Badges: Derive Insights from Data | Prepare Data for Looker Dashboards and Reports Aug 2026
EF SET English Certificate — C1 Advanced (66/100: Listening C2, Reading C1, Speaking C1, Writing B2) Jan 2026
Code in Place (Python Programming) — Stanford University 2026

Education

Bachelor of Science in Computer Science — University of the People Admitted | Expected Start: 2027
Pasadena, CA, USA | WSCUC-accredited institution | Fully Online
Technical Baccalaureate in Software Development – Instituto Nacional San Luis | *GPA: 9.5/10.0* 2026
